नेपाल

*“Working in partnership with civil society to  
translate HIV/AIDS policy intentions into concrete actions”*

# EXECUTIVE SUMMARY

## INTRODUCTION

The first case of HIV/AIDS in Nepal was reported in 1988. Since then Nepal has become a country with a concentrated HIV epidemic, with HIV infection occurring primarily in certain subgroups. Recent reports indicate that there are approximately 61,000 people in Nepal living with HIV, and over 4,000 reported AIDS cases. In the absence of effective interventions, it is estimated that HIV prevalence could increase to 1-2% of the 15-49 year-old population and that AIDS could become the leading cause of death in Nepal within the next decade.

The Nepal Government's National HIV/AIDS Strategy was launched in January 2003 and was translated into a National HIV/AIDS Operational Plan in July 2003. Overall, the aim is to impact on the worsening HIV and AIDS situation by slowing the spread of the epidemic and through improving the quality of life for people living with HIV and AIDS. The focus of the response is the main urban centres, and the towns and settlements along the East-West highway. Services and support will also be located in a number of hill districts, where there are high levels of out migration to India.

The National HIV/AIDS Action Plan and Budget for 2005-2006 was produced following extensive consultation about the extent of the problem, and what needs to be done about it. Stakeholders – i.e. government officials, representatives of beneficiary groups, broader civil society actors, and donor partners – are all agreed that the Action Plan provides the single point of reference for the HIV/AIDS response in Nepal. Also, the Plan and Budget is grounded on the principles of transparency, accountability, and harmonized responses, and provide the first step in Nepal's achievement of the Three Ones, namely: -

- ONE agreed AIDS action framework
- ONE national AIDS coordinating authority
- ONE agreed monitoring and evaluation framework

Stakeholders have arrived at consensus around priorities for programmatic responses and resource allocations, regular reviews and consultations, and coordination around this action framework in a way that is consistent with their respective mandates.

The Action Plan is ambitious and implementation will be a challenge. In view of this, stakeholders are working together to enhance the institutional architecture, including fund-flow, accountability and coordination mechanisms, as well as mechanisms to enhance the greater involvement of beneficiary groups and grass roots organisations.

## PLAN OVERVIEW

The 2005-2006 Action Plan is presented in two parts: -

- Part One is the programme framework. It presents the full scope of programmatic activities, including planned coverage, envisioned to achieve the following strategic outcomes which were defined in the National HIV/AIDS Strategy 2002-2006: -
  - i) Reduced HIV infections among vulnerable groups and young people
  - ii) Expanded treatment, care and support services for people living with and affected by HIV and AIDS
  - iii) Supportive policy environment to ensure effective implementation of prevention and treatment and care services
  - iv) Expanded strategic information base that will include a harmonized monitoring and evaluation frame among all stakeholders in the national response and strengthened surveillance system
  - v) Improved management and implementation mechanisms for an expanded response.

The programme has five action components: targeted prevention; treatment, care and support; surveillance and research; leadership and management.

- Part Two is the financial and budget framework. It presents the estimated 2005-06 budget for all programme activities based on implementation targets and agreed unit costs. It also reflects the financial contributions of major stakeholders and the lead entity for each activity. These include USAID, DFID, the Global Fund to Fight AIDS, TB, and Malaria, the UN System, and other international NGOs. An important aspect of Part Two is the Summary Budget which shows resource allocations per programme component and the resource gaps in each as well as in the total. Annex 1 of Part Two shows the calculation of unit costs for each intervention.

The 2005-06 Action Plan addresses needs and issues that have emerged as a result of the current broader social, economic, and political context of the country and of developments within the community of stakeholders in HIV and AIDS. Two significant dynamics are recognized by the Plan: i) the value and strength of civil society organizations as implementing partners in reaching the most-at-risk and vulnerable populations, and the need to augment their organizational and implementation capabilities to perform this important role, and ii) awareness of the needs of vulnerable groups which have not been previously acknowledged as priorities, such as male sex workers, internally displaced populations, and the formal and non-formal workforce.

The Plan proposes strengthening responses and implementation in the following areas: -

- i) **Targeted prevention interventions** should be comprised of a comprehensive package of services, namely peer-led information, education and communication; STI service or referrals; VCT service or referrals; condom distribution; and community sensitization. Thus, stakeholders involved in interventions for sex workers, men who have sex with men, injecting drug users, mobile populations and families, uniformed services and young people are urged to adopt this approach. Coverage targets (number of districts and persons reached) are also increased to achieve scaled-up proportions.
- ii) **Prevention for people living with HIV and AIDS** is a critical prevention strategy and is a new activity component.
- iii) **Adult and pediatric care and support** services need to be boosted, and coverage targets are almost doubled., including for ARV treatment.
- iv) **Mainstreaming AIDS issues** in key Ministries and at the district level must be implemented systematically to achieve the multisectoral expansion of AIDS responses. Strengthening their capacities through advocacy, programming, and institutional support is consequently provided.
- v) **Surveillance and research** efforts should be expanded to generate adequate data on vulnerable populations.

## **STAKEHOLDER PROGRAMME FOCUS**

The stakeholders of the Action Plan – government, civil society, bilateral and multilateral organizations, international NGOs – contribute in distinct areas according to their comparative advantage.

Prevention is the cornerstone of the Action Plan, a strategic focus consistent with the dynamics of the epidemic which show growing HIV concentration in groups having specific risk behaviours of injecting drug use and unprotected sex. Consequently, targeted prevention interventions are core stakeholder responses.

USAID and its technical partners – FHI, Policy, and PSI – invest almost half of their programmatic funding in this area. The specific component on female sex workers and clients has received major support, thus ensuring the delivery of prevention education and services, including condom social marketing, to this group. USAID supports 32% of the financing of the National Action Plan. While DFID assistance accounts 33% of pledged amount with focus on programme for Mobile population and Treatment Care and Support, assistance has also been extended to meet some of the financing gap in other areas.

The Global Fund to Fight AIDS, TB and Malaria (GFATM) contributes towards prevention, treatment, care and support. The prevention component of the GFATM focuses on mobile populations and young people, including extensive awareness-building and advocacy. The GFATM programme provides major support to the treatment, care and support component through the scale-up of ARV treatment. The 2005-06 GFATM support will account for approximately 15% of the national estimate of PLWHAs needing ARV drugs. The GFATM contribution to the total Action Plan is 18% of the resource needs.

The United Nations System likewise provides strong support to the achievement of the prevention objective, with a special focus on young people. Life skills-based education combined with HIV prevention and HIV/AIDS/Reproductive Health services are programmes that have received close to 75% of the System's AIDS programme resources. In addition, the UN System also performs a major role in social mobilization and advocacy, emphasizing civil society capacity-building, both at the central and district levels. The UN System contributes 5.8% of the resource needs of the Action Plan.

Similarly, the World Bank is providing unprecedented support to civil society development, particularly in institution-building, through a direct contribution of \$ 50,000 for this year.

The local non-governmental organizations are key stakeholders in the prevention area. In particular, the Nepal Red Cross Society and the Family Planning Association of Nepal sustain ongoing awareness-raising and life-skills education for young people, especially at community levels. These two local NGOs contribute 6% to the Action Plan.

A cross-cutting theme is the role of civil society in management and implementation. Local NGOs are central mechanisms for programme delivery and have largely been the implementing partners of bilateral and multilateral donors. Their distinctive contribution has been in prevention education and services, e.g., counseling. It is envisioned that they will assume more important roles in the delivery of treatment, care and support activities.

HMGN has allocated resources to support the operations of the National Center for AIDS and STD Control (NCASC) as well as for conducting advocacy, and monitoring and evaluation activities. The national operational plan and budget complements the overall national programme as guided by the National HIV/AIDS strategy 2002-2007. The government investment in the national plan 2005-2006 is \$144,606 (close to 1%), double their 2003 investment of approximately \$700,000.

The 2005-06 Action Plan is costed at **US\$ 23, 609,764**, of which **\$ 14,506,383** is already contributed or pledged by stakeholders.

Table 1 below shows the summary budget and pledged financing, broken down according to programme components. Table 2 presents the resource pledged by stakeholders.

## **IMPLEMENTATION OF THE ACTION PLAN**

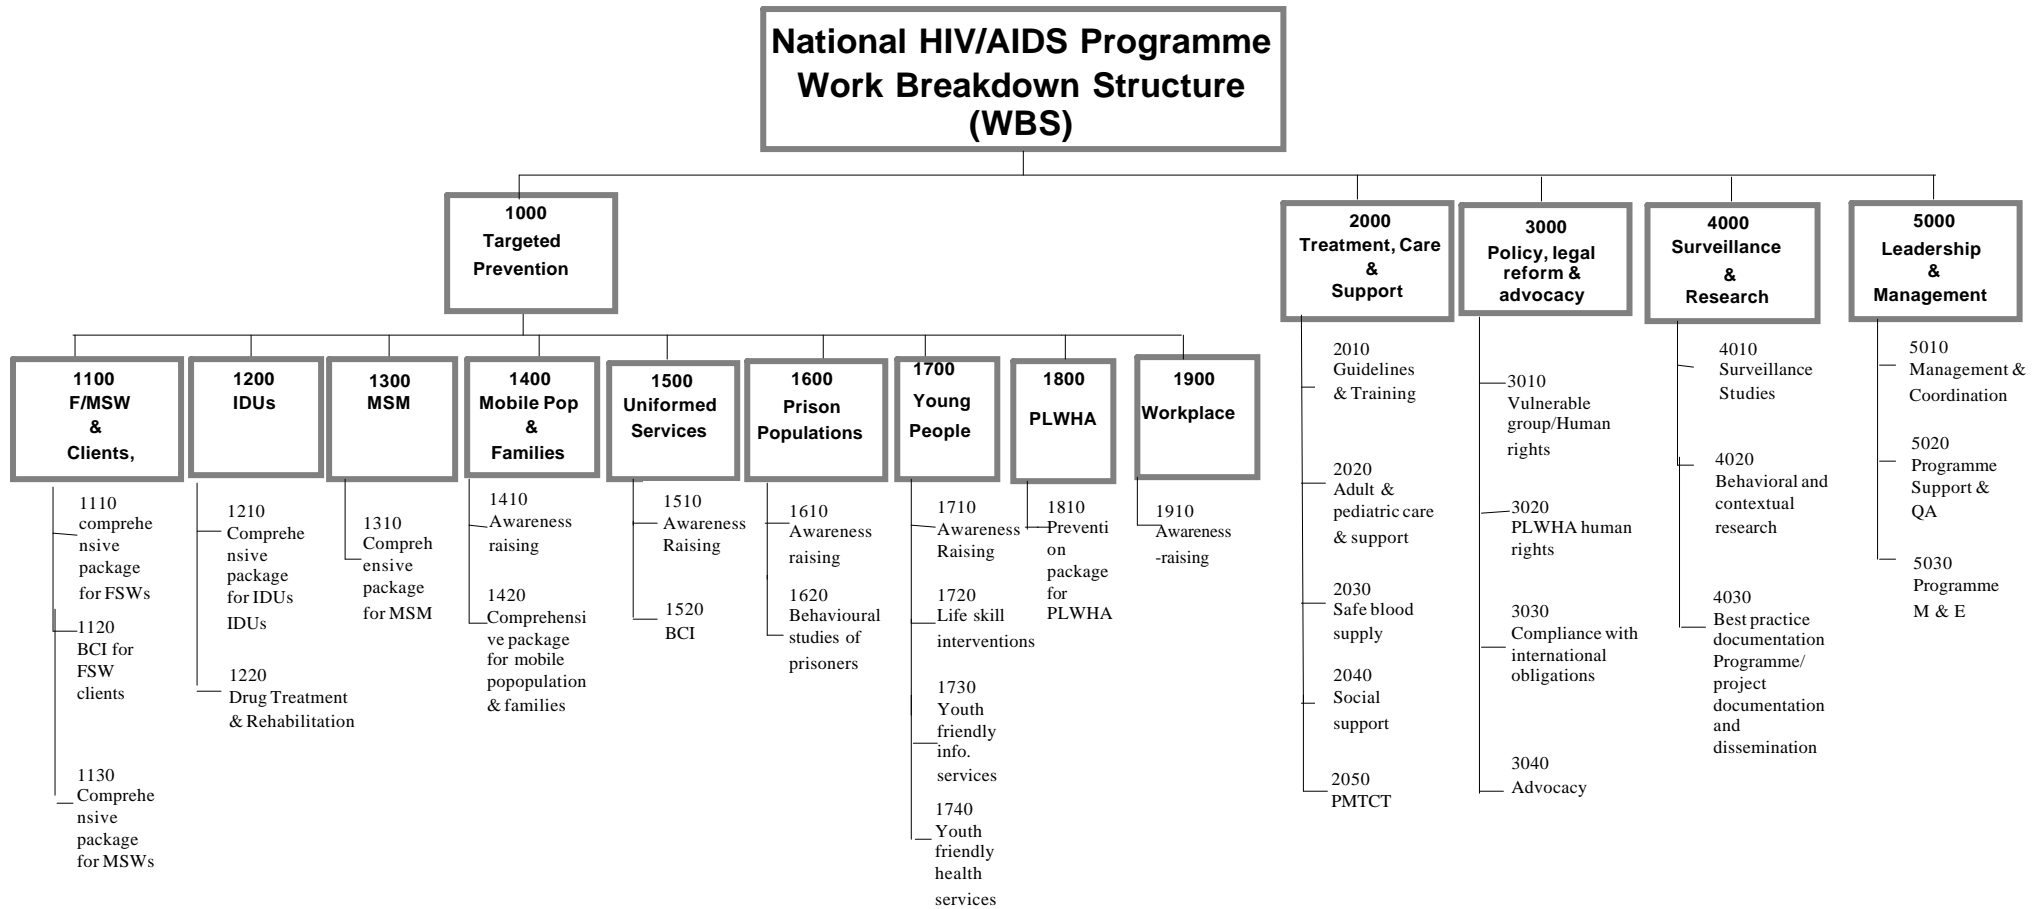

The 2005-2006 Action Plan represents a growing effort to harmonize the specific programmatic contributions of major stakeholders to the national AIDS response. Each stakeholder is committed to have appropriate detailed work plans and performance monitoring mechanisms. Reviews of the National

Action Plan will be conducted at mid-term and at the end of the Nepal fiscal year (July 2006).

## **PLANNING PROCESS**

The planning for the 2005-2006 Action Plan featured a participatory and broad-based, multi-partner process. Multisectoral consultation workshops took place in May and June 2005 to solicit inputs and feedback from civil society, government, bilateral and multilateral organizations. A drafting committee, selected by the broad-based constituency in May, was responsible for obtaining stakeholder-specific inputs and consolidating these into the workplan framework. A consensus workshop was held in July 2005 to agree on strategic and programme priorities and coverage targets.
