SUMMARY OF SITUATION

The following and additional data and citations can be found at www.aidsdatahub.org

HIV Prevalence

- In May 2009, a national consensus meeting estimated there are 4,622 to 9,244 MSM in Mongolia. This is likely to be an underestimate as it represents only 0.89% of adult male population aged 15-49.
- In 2008, out of 46 reported cases of HIV, 34 are men, 27 of whom identified as MSM.
- MSM is the group most at risk of HIV infection in Mongolia.

Selected Behaviors & Knowledge (2007)

- 75% of 114 MSM in Ulaanbaatar had multiple sex partners in the last year.
- 87% used a condom with last male partner.
- 54% consistently used condoms in the last year.
- 81% have had an HIV test and got the results.

National Response

- MSM are formally organized, having social groups, and NGOs.
- There is a specific program line for MSM in the national HIV plan.
- There is no specific budget line for MSM in the national HIV plan.

RECOMMENDED RESPONSES

Contact the UNAIDS focal point in Mongolia for more information at altanchimeg.delegchoimbol@undp.org

- Remove laws impeding effective HIV prevention.
- National strategic plan should include a costed comprehensive response for MSM and TG.
- More systematic and regular surveillance of HIV rates, risk behaviors and MSM communities.
- Fully fund prevention programs, including condom and lubricant provision, peer education and outreach, community development, mass media, and individual counseling.
- Evaluate the effectiveness of interventions.
- Develop programs which meet diverse needs.
- Support organizational assessment and develop the capacity of MSM community-based organizations to provide advocacy and peer-based programs.
- Scale up MSM-friendly VCT and sexual health screening centers.
- Expand care, treatment and support facilities for HIV-positive MSM and TG.
- Address stigma and discrimination toward PLHIV in MSM communities.
- Specific prevention activities should focus on transgender people.
- Develop activities to teach about sexual orientation and human rights to teaches, doctors, police, schools and communities.
- Strengthen understanding of behavior changes processes and techniques.
The Regional Picture

REPORT ON THE COMMISSION OF AIDS IN ASIA

The Commission on AIDS in Asia used the Asian Epidemic Model (AEM) to construct a picture of how the regional HIV epidemic in different sub-populations has developed over the years, and how it is likely to grow in the future if prevention stays the same.

The regional projection shows that Asia is on the brink of a large increase in new infections among MSM if risk behavior stays at current levels of low condom use with many concurrent male partners.

AEM is a computer model that simulates the spread of HIV within and between important at-risk populations and their partners. Key inputs are levels of HIV (prevalence), and the most important HIV-related risk behaviors of each sub-population and their sizes. The regional projection was made by adding up results of AEMs for countries in Asia.

The main risky behaviors for MSM are the frequency of unprotected anal sex contacts with regular and commercial male partners, and unprotected vaginal sex with commercial and regular female partners. The probability of HIV being transmitted during anal sex between a HIV+ man and another man or transgender is much higher than during vaginal sex with a woman.

However if high coverage with effective interventions raises condom use in anal sex among men to 80% levels over the next few years, then the growing epidemic among MSM can be controlled as shown in the model on the left.

KEY MSM SESSIONS AT ICAAP

8 Aug. 08.00 Forum: From 200 to 0: Responding Effectively to HIV Among MSM in Asia and the Pacific
10 Aug. 16.00 Satellite: MSM and HIV in Asia and the Pacific – Cross-Cutting Issues
11 Aug. 16.00 Symposium: Overcoming legal barriers to comprehensive prevention among men who have sex with men (MSM) and transgender (TG) persons in Asia and the Pacific
18.00 Satellite: MSM HIV Infection in Developed East and South-East Asia
18.00 Satellite: Gender Variance and Male-Male Sexualities Across the Global South
12 Aug. 11.30 Launch: The Pacific Sexual Diversity Network Strategic Plan
14.00 Symposium: Addressing Legal Barriers and Criminalization of Risk Populations

Session details and all of the MSM Country Snapshots are available at www.msmasia.org
