HIV EPIDEMIC AND RESPONSE IN ASIA AND THE PACIFIC

Regional Posters prepared by UNAIDS Asia-Pacific and Data Hub for the 11th UNAIDS Asia-Pacific Regional Management Meeting, Bangkok, 25-28 October 2014
TABLE OF CONTENTS

Ending AIDS by 2030 ............................................................... Page 3

Reaching 90 – 90 – 90............................................................... Page 4

Focus on the right populations................................................. Page 5
ENDING AIDS BY 2030

Intensive action and innovation needed

Number of new HIV infections

REACHING 90 – 90 – 90

Insufficient scale-up will leave half the people living with HIV without access to treatment by 2015

Number of people receiving ART

- Number of people receiving ART by 2013
- Number of people receiving ART by 2015 (with current pace)

Focus on the right populations
Men who have sex with men are the largest key population at higher risk, with rising HIV prevalence

**Estimated population size and HIV prevalence among MSM**

</table>

**Key**
- HIV prevalence
- Population size
- Country (---%, ---)

**Note:** MSM data is not available for Pakistan

Women who sell sex are at risk of HIV infection; male clients remain uncounted, with no interventions.

Estimated population size and HIV prevalence among FSW

Population size

HIV prevalence among FSW (%)

People who inject drugs, the smallest of key populations, can all be provided with harm reduction to limit the spread of HIV.

Estimated population size and HIV prevalence among PWID
