- 56 out of 65 people living with HIV know their status and are on treatment.
- 895 TB cases notified and registered for treatment (new and relapse).
- 460 new and relapse TB cases were tested for HIV.
- 91% of all TB cases registered for treatment were successfully treated.

- 13 per 100,000 population TB mortality rate for the 11 programme countries.
- 5 rif resistant and/or multi-drug resistant TB cases diagnosed.
- 100% treatment success rate of rif resistant and/or multi-drug resistant TB.

---

1. Reached refers to clients being reached with the minimum components of HIV prevention programmes, including IEC/BCC, condoms and lubricants and HIV testing referral. If one component of this package is not offered, then the client is not counted as having received the minimum HIV prevention package of services.
2. The programme estimates 70 PLHIV across the 11 GF supported PICs. Note these are programme and not spectrum estimates. Out of these, 65 have been diagnosed and reported to be alive and in country.
3. 56 PLHIV accessed treatment in 2019. 29 (52%) reported VL results. 27 (48%) did not report VL results. 21 of 29 (72%) that reported VL results are virally suppressed.
