

Asia and the Pacific

Marked inequalities and diverse epidemic trends affect progress in the HIV response in Asia and the Pacific. The HIV epidemic in the region disproportionately affects people from key populations, especially young people (aged 15–24 years), and their sexual partners. Young people accounted for around a quarter of new HIV infections in the region in 2022. In Cambodia, Indonesia, the Lao People’s Democratic Republic, Myanmar, the Philippines and Thailand, nearly half of new HIV infections occurred among young people. Although the numbers of new HIV infections and HIV-related deaths have declined overall at the regional level since 2010 (Figure 4.1), some countries have experienced an expansion of their epidemics in recent years.¹

Median HIV prevalence among people from key populations remains much higher than among the general population (Figure 4.2). Since 2010, estimated numbers of new HIV infections among gay men and other men who have sex with men increased by six times in the Philippines, tripled in Cambodia and almost doubled in the Lao People’s Democratic Republic. The increasing use of stimulants and synthetic opioids exacerbates the risks of HIV transmission among people who use drugs (1).

Figure 4.1 Numbers of annual new HIV infections and AIDS-related deaths, Asia and the Pacific, 2000–2022

Source: UNAIDS epidemiological estimates, 2023 (<https://aidsinfo.unaids.org/>).

¹ Countries in the region with increasing numbers of new HIV infections in 2022 include Afghanistan, Bangladesh, Fiji, Papua New Guinea, Philippines and Timor-Leste.

2022 DATA

- **14%** decrease in new HIV infections since 2010
- **51%** decrease in AIDS-related deaths since 2010
- People living with HIV:
6.5 million [5.3 million–7.8 million]
- New HIV infections:
300 000 [220 000–400 000]
- AIDS-related deaths:
150 000 [110 000–220 000]

Testing and treatment cascade (all ages):

- % of people living with HIV who know their HIV status:
78 [64–94]
- % of people living with HIV who are on treatment:
65 [54–78]
- % of people living with HIV who are virally suppressed:
62 [51–74]

Financing of the HIV response:

- Resource availability for HIV:
US\$ 3.7 billion [60% gap to meet the 2025 target]

Figure 4.2 HIV prevalence among key populations compared with adults (aged 15–49 years), reporting countries in Asia and the Pacific, 2018–2022

How to read?

The median HIV prevalence among countries that reported these data in Asia and the Pacific was:

- 1.1%** among sex workers.
- 4.7%** among gay men and other men who have sex with men.
- 4.2%** among people who inject drugs.
- 3.9%** among transgender people.
- 0.9%** among people in prisons.

The estimated HIV prevalence among adults (aged 15–49 years) is **0.2% [0.2–0.3%]**.

Sources: UNAIDS Global AIDS Monitoring, 2023; UNAIDS epidemiological estimates, 2023 (<https://aidsinfo.unaids.org/>).

Notes: n = number of countries. Total number of reporting countries = 42.

The adult prevalence uncertainty bounds define the range within which the true value lies (if it can be measured). Narrow bounds indicate that an estimate is precise, while wide bounds indicate greater uncertainty regarding the estimate.

Efforts are under way to expand access to combination HIV prevention services, including harm reduction services, self-testing and virtual interventions, along with greater provision of pre-exposure prophylaxis (PrEP). Several countries reported significant increases in the uptake of PrEP, including Viet Nam, which saw a 59% increase in PrEP use in 2022. Significant gaps in prevention service coverage remain (Figure 4.3), however, particularly among young people from key populations.

Progress towards the 95–95–95 targets has been uneven across countries and populations in the region, reflecting difficulties in reaching people from key populations and their sexual partners with testing and treatment. Antiretroviral therapy coverage over 80% has been achieved only in Cambodia, New Zealand and Thailand. In about a third of countries (eight of 22 countries with published data), antiretroviral therapy coverage is below 50%. The scale-up of dolutegravir-based regimens as the primary treatment option is progressing in the region and is expected to improve treatment outcomes.

Figure 4.3 Coverage of HIV prevention interventions among key populations, select countries with available data, Asia and the Pacific, 2018–2022

* Calculated based on 11 reporting countries for female sex workers, nine countries for gay men and other men who have sex with men, six countries for transgender people and five countries for people who inject drugs.

Source: UNAIDS Global AIDS Monitoring, 2023 (<https://aidsinfo.unaids.org/>).

Note: prevention coverage is measured as the percentage of people in a key population who report having received a combined set of HIV prevention interventions in the past three months (at least two out of three services: given condoms and lubricants; received counselling on condom use and safe sex; tested for sexually transmitted infections for transgender people, sex workers and gay men and other men who have sex with men, or received sterile needles or syringes for people who inject drugs).

Stigma and discrimination against people living with HIV and people from key populations continue to pose significant barriers. All countries in the region, except New Zealand and some states in Australia, criminalize sex work. Seventeen countries criminalize same-sex sexual acts in private. Of note, in November 2022 and April 2023 respectively, the Parliaments of the Cook Islands and Singapore removed colonial laws prohibiting consensual sex between men. Transgender rights are under further threat with the recent decision of the Federal Shariat Court to strike down portions of the groundbreaking and progressive Pakistan Transgender Act 2018. Overcrowding in prisons and other closed settings remains rampant in most countries in Asia, with many offences linked to harsh punishment of drug use and possession for personal use (2). The death penalty is in place for drug offences in at least 14 countries in Asia and the Pacific.

Committed national political leadership and collaboration are essential. The Association of Southeast Asian Nations (ASEAN) adopted the Leaders' Declaration on Ending Inequalities and Getting on Track to End AIDS by 2030 (3), which is being translated into a road map for action (4).

Community-led responses remain vital elements of the HIV response. Community-led monitoring is being implemented across the region, and efforts to harmonize approaches and provide technical assistance to community-led organizations are proceeding. Indonesia, Nepal and Papua New Guinea have already completed a full cycle of community-led monitoring, but meaningful engagement of young people from key populations in decision-making platforms remains limited (5).

The key priorities for the HIV response in Asia and the Pacific include modernizing and scaling up HIV prevention, testing, treatment and care services; leveraging innovative solutions such as PrEP and virtual interventions; removing barriers to accessing services; prioritizing key populations; empowering community leadership; and implementing legal and policy reforms.

Domestic resources for HIV in the region, which comprised 85% of all resources available for HIV in 2022, decreased by 3% compared with 2021. Pursuing equitable and sustainable financing should be prioritized to close the 60% funding gap in estimated annual resource needs to meet the 2025 targets.

Table 4.1 Reported estimated size of key populations, Asia and the Pacific, 2018–2022

Country	National adult population (aged 15–49 years) for 2022 or relevant year	Sex workers	Sex workers as percentage of adult population (aged 15–49 years)	Gay men and other men who have sex with men	Gay men and other men who have sex with men as percentage of adult population (aged 15–49 years)	People who inject drugs	People who inject drugs as percentage of adult population (aged 15–49 years)	Transgender people	Transgender people as percentage of adult population (aged 15–49 years)	People in prisons	People in prisons as percentage of adult population (aged 15–49 years)
Afghanistan	20 200 000			10 100		25 700

Note 1: Estimates shown are government-provided estimates reported for 2018–2022. Additional and alternative estimates may be available from different sources, including the Key Populations Atlas (<https://kpatlas.unaids.org/>), academic publications or institutional documents.

Note 2: The regions covered by the local population size estimate are as follows:

Afghanistan: Gay men and other men who have sex with men: Herat, Jalalabad, Kabul, Kandahar, Kunduz and Mazar. People who inject drugs: Faizabad, Herat, Jalalabad, Kabul, Kandahar, Kunduz, Mazar and Zaranj.

Mongolia: Darkhan, Dornod, Orkhon and Ulaanbaatar.

New Zealand: Northern Region

Philippines: Cebu, Cebu Province, Danao, Lapu-Lapu, Mandaue, Naga and Talisay.

Viet Nam: Ha Noi

Criminalization of transgender people

- Yes
- No
- Data not available

Criminalization of sex work

- Any criminalization or punitive regulation of sex work
- Sex work is not subject to punitive regulations or is not criminalized
- Data not available

Criminalization of same-sex sexual acts in private

- Death penalty
- Imprisonment (14 years–life, up to 14 years) or no penalty specified
- Laws penalizing same-sex sexual acts have been decriminalized or never existed, or no specific legislation
- Data not available

Criminalization of possession of small amounts of drugs

- Yes
- No
- Data not available

Laws criminalizing transmission of, non-disclosure of or exposure to HIV transmission

- Yes
- No, but prosecutions exist based on general criminal laws
- No
- Data not available

Laws or policies restricting the entry, stay and residence of people living with HIV

- Deport, prohibit short- and/or long-stay and require HIV testing or disclosure for some permits
- Prohibit short- and/or long-stay and require HIV testing or disclosure for some permits
- Require HIV testing or disclosure for some permits
- No restrictions

Parental consent for adolescents to access HIV testing

- Yes
- No
- Data not available

Mandatory HIV testing for marriage, work or residence permits or for certain groups

- Yes
- No
- Data not available

Constitutional or other non-discrimination provisions for sex work

- Yes
- No
- Data not available

Constitutional or other non-discrimination provisions for gender identity

- Yes
- No
- Data not available

Laws protecting against discrimination on the basis of HIV status

- Yes
- No
- Data not available

Constitutional or other non-discrimination provisions for sexual orientation

- Yes
- No
- Data not available

Constitutional or other non-discrimination provisions for people who inject drugs

- Yes
- No
- Data not available

Notes: ^aLaws criminalizing transgender people refers to laws that criminalize the gender expression of transgender and gender diverse people, including laws against cross-dressing or impersonating the opposite sex.
^bCriminalization of sex work refers to criminalization of any aspect of sex work, including buying sexual services, selling sexual services, ancillary activities associated with buying or selling sexual services, and profiting from organizing or managing sex work.
^cCriminalization of possession of small amounts of drugs refers to the criminalization of possession of any quantity of drugs, including possession of a quantity of drugs sufficient only for personal use. A country is still considered to criminalize possession of small amounts of drugs, even if use or possession of marijuana has been decriminalized.
^dConstitutional or other non-discrimination provisions refer to whether constitutional prohibitions of discrimination have been interpreted to include discrimination on the grounds of sex work/sexual orientation/gender identity/drug use or dependency by courts and/or government policy, and/or whether there are other legislative non-discrimination provisions specifying sex work/sexual orientation/gender identity/drug use or dependency.
