## ADVISORY

In June 2022, the Department of Health released the Administrative Order No. 2022-0024 – Guidelines on Differentiated Treatment for People Living with Human Immunodeficiency Virus (PLHIV) and Prophylaxis for HIV-Exposed Infants. Based on the new guidelines, PLHIV are tagged as currently on ART if he/she was able to access antiretroviral drugs or ARVs within 30 days (one month) from the last expected date of consult or last (run-out) pill.

Please be advised that January 2023 HIV/AIDS & ART Registry of the Philippines (HARP) report and succeeding reports will reflect the new ART guidelines, hence, key partners, stakeholders, and readers are advised to consider the above-mentioned changes in interpreting the succeeding HARP reports.

Thank you.

### HIV/AIDS & ART REGISTRY OF THE PHILIPPINES

The HARP is the official record of total number of diagnoses (laboratory-confirmed), ART outcome status and deaths among people with HIV in the Philippines. All individuals in the registry are confirmed by the San Lazaro Hospital STD/AIDS Cooperative Central Laboratory (SACCL) which is the HIV/AIDS National Reference Laboratory (NRL) and DOH Certified Rapid HIV Diagnostic Algorithm- HIV/2e Confirmatory Laboratories (CCCLs). Confirmed HIV positive individuals were reported to the DOH Epidemiology Bureau (EB) and recorded to HARP. ART figures are counts of HIV positive adult and pediatric patients currently enrolled and accessing Antiretroviral (ARV) medication during the reporting period in 180 treatment hubs and primary HIV care treatment facilities that had reported in the HARP. This report did not include patients who have previously taken ARV but have died, left the country, have been lost to follow-up and/or opted not to take ARV. Lost to follow-up is considered once a person have failed to visit a treatment facility more than 3 months after the expected date of ARV refill.

HARP is a passive surveillance system. Except for HIV confirmation by the NRL & CrCLs, all other data submitted to the HARP are secondary and cannot be verified. Hence, HARP cannot determine if an individual's reported place of residence is where the person got infected, or where the person lived after being infected, or where the person is presently living. This limitation has major implications on data interpretation. Readers are advised to interpret the data with caution and consider other sources of information before arriving at conclusions.
